

Serial No. 09/632,266

Page 5, after line 7, add the following:

- A2* - figure represents a diagram of the circuit breaker comprising the trip device shown in figure 2.

Page 6, change the third full paragraph to the following:

*A3* In the man-machine interface represented in figure 2, a graphic or semi-graphic display screen 11 displays a tripping curve 12. In this figure, a portion of curve 13 representative of a long-delay or overload protection current threshold has a different visual aspect. In this case, this portion of curve is thicker than the rest of the curve, and a parameter 14 corresponding to this broader portion of curve is framed. In the case of figure 2, the long-delay tripping threshold is 1000A. The framed parameter can also be displayed in bold characters to highlight display of the selection. Figure 7 represents a diagram of the circuit breaker comprising the trip device shown in Figure 2. Corresponding reference numbers refer to common elements in Figures 2 and 7.
